

Department of Home Science

Department of Home Science established on 1996, this is the interdisciplinary optional subject wise pattern conducted for exam. The important of home science at the present time is of immense value. Today everybody has become conscious of health, hygiene, dietary habits, vitamins, child care, happy family, sweet home, interior decoration etc. Home science gives training to student how to make our home “ sweet Home “ and maintain the health of our family good and well. The girl students from all section of society and form different economic background take admissions in the college and pursue their studies diligently. This is job oriented subject and related with everyone's life.

Home science is a discipline which is considered important for the education of family. A “Health is Wealth' as the saying goes on, much of our health depend on hygiene. Realising good and nutritious food is also responsible for good health. The value of housekeeping has been recognised for the healthy development of society. It has been possible to develop principal shop home science over the years. The discipline of home science recognise the value of food and nutrition for developing top healthy body. The management of the finance of The Homes is a equal important functions. Food, housing, clothing and the preparation of dress as you significance in home science. Nursing and health education dependent subject of study. The care of the health of children and health training are necessary segment of Home Science. Child development is based on the theoretical and practical finding of psychological and occupies an important place in home science.

Child Development: The physical, intellectual development and emotional development of the child has to take place in the social context. This principles of child

development have to be known by the student of Home Science and the Teachers who are preparing teachers for element and secondary schools. The process of child development has both the individual and social dimension. Modern psychology has developed many scientific principles in regards to the development of the personality of the child.

Nutrition: Food and nutrition are the basic needs of all human beings. Food and nutrition a responsible for good health. Home science teach requirement of vitamins, proteins, carbohydrates, fat etc. Home science speech different battery therapy for diabetes, fever, jaundice etc.

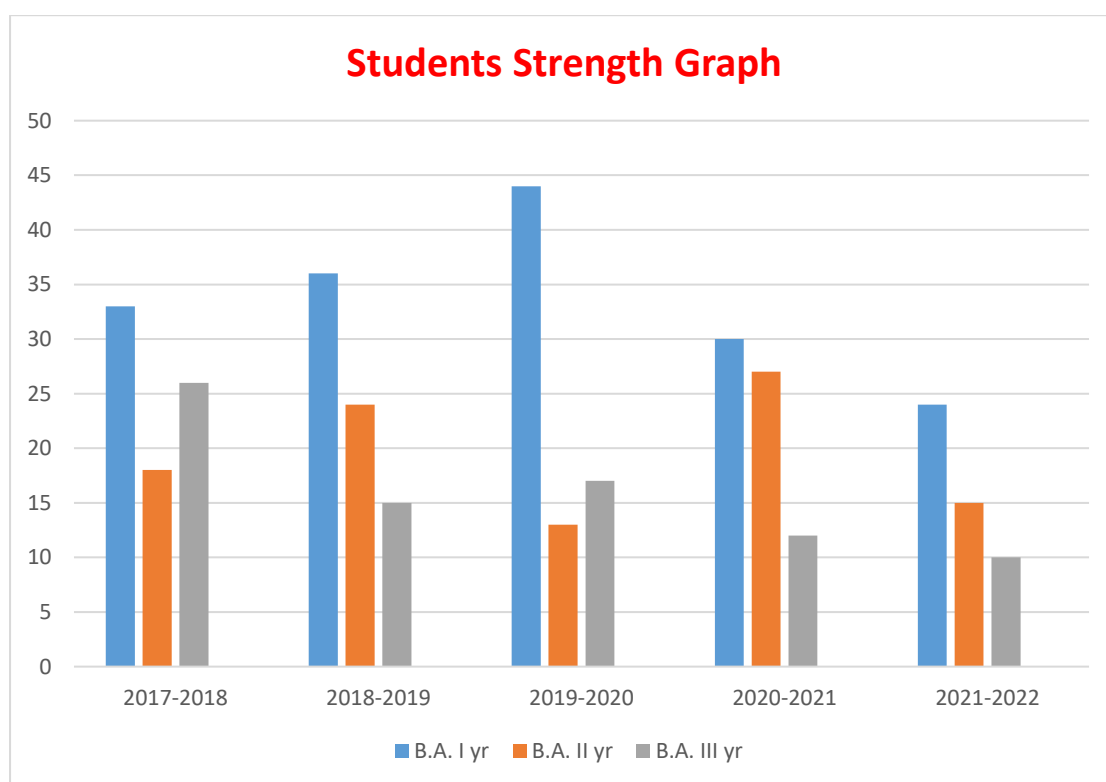

Human relationship: For the development of healthy and happy society, the human relations have to be cordial. There are always day difference of opinion and origin. In a diverse society like India, the child has to be prepared in a way that in learn from the beginning to have regards for the views of the other and has to learn the art of social livings. Beside this a teacher who has to deal with so many students the art of Human Relationship has to be learnt.

Textile and laundry: Clothes are also needs to human being. In modern civilized world, the textile industry in a tremendous way. Human being like to dress and dress themselves beautifully. It is in this context that knowledge of beauty and utility of textile is very significant. Teachers and student should know basic of textile, the fabric and the texture and the colour combination of the cloth.
